Your grade: 100%

1. What type of forest is a classification algorithm that potentially contains hundreds of different decision trees?

1 / 1 point

Global Forest

Random Forest

> Correct! A Random Forest is a classification algorithm that potentially contains hundreds of different decision trees

The Multiple Forest

Model Forest

2. When describing models what type of model will feature coefficients help to explain?

1 / 1 point

SVM

Linear Model

> Correct! Feature coefficients help to explain linear models.

KNN

Global Surrogate model

3. What type of surrogate model tries to approximate a black-box model globally on every instance in the data set?

Global Surrogate model

> Correct! The Global Surrogate model tries to approximate a black-box model globally on every instance in the data set?

Complex Surrogate model

Local Surrogate model

Strategic Surrogate model
